

Product information
Capacitor discharge, drawn arc and
short-cycle drawn arc stud welding

KBM-850 CNC Stud and Nut Welding Machine

KBM-850 CNC stud and nut welding machine

Description:

The multifunctional CNC controlled and fully automatic KBM-850 CNC stud and nut welding machine is being presented for the first time at the "Euro-Blech" trade fair.

All known stud welding methods according to the capacitor discharge, drawn arc and short-cycle drawn arc principle are demonstrated by welding studs on a workpiece using several welding heads. As a technical novelty the patented nut welding (Patent No. 10143220) is demonstrated on punched and non-punched workpieces. The samples welded at the trade show are available on request to allow practical tests and laboratory examinations to be carried out which will provide proof of the incomparable welding quality.
